Novoda GmbH
Grünberger Straße 44a
10245 Berlin

Dear Ms. Kane,

As a mobile software developer with a strong engineering background, I would like to express my interest in joining *Novoda* as an *iOS Engineer* in Berlin. Novoda's innovative and ambitious market environment portrays for me a perfect professional challenge to apply my current knowledge to design apps that reach millions worldwide. Given my practical experience, I feel confident that I would provide a perfect fit for this great job offer.

With more than four years of experience as Mobile Developer, I have been reassured of my ability towards producing high quality and reliable applications. I currently develop iOS apps with both Swift and Objective-C languages for the global information and communication platform 'BIOconnect', used by employees and partners at Berlin based global medical device company BIOTRONIK. Besides giving access to information related to the company, colleagues and partners can use this platform to collaborate with each other worldwide as well. I also developed an app to manage and track BIOTRONIK's implants inventory in hospitals by scanning data matrix and EAN barcodes through iPads.

I haven't created apps only for companies in several business fields (healthcare, multimedia, messaging, among others) but also as freelance software developer using interesting frameworks and recent technologies such as Reactive Swift, server side Swift with Vapor, Realm Cloud service and continuous integration using Fastlane/Jenkins with focus on unit testing, among others. I have also developed high quality apps applying some of my academic knowledge in computer science which includes design patterns, best coding practices, test automation, code optimization and software architecture, including current paradigms such as Clean Architecture, MVVM-C and VIPER but also taking advantage of classic patterns like MVC and MVP. My experience and exposure to diverse fields gives me a wide industry knowledge and very high flexibility to rapidly adapt to the product-engineering field with diverse and ambitious clients.

Responsible and self-driven working is for me as natural as the ability to quickly join teams, face new situations, which involves learning new technologies and using modern tools. My excellent relationships with people, together with passion and reliability are just some of the skills that have led me to my current position and fundament my desire to join your team.

Working with a diverse team developing mobile applications tempts me both as an intellectual challenge and at the same time as the possibility to learn more about iOS development, continuous integration, unit testing and iOS ecosystem in general. Together with the diversity I can bring to your already global team, I am convinced that my acquired skills are just a glimpse of my potential, which will enable me to become a valuable team member at Novoda. Thank you for your time and I look forward to hearing back from you at your earliest convenience.

Sincerely,
Julian Caicedo
